It's Remi here from Team MV I am the user success Lead here at member volt. And in this video walkthrough, we're gonna be showing you our new feature, which is custom redirect links, and how you can shorten file names, or link names inside of member vote. So on the left hand side you have your left navigation if you go down to where it says content, and click to expand that. You'll see your three links in here products pages and links. If you click on links, that will take you into the link area where you can create a link. Now the best way to describe this is if you've ever used anything like Bitly before or pretty links, where you put in a long domain name and it will shorten it for you. This is what you can now do inside a member vote but using your own member volt link, or your own custom domain link if you have set up a custom domain with us. So I just there's two in here at the moment you can see one that we've created a story link and a quiz link and how this would work is let's say I've created a quiz on quizmaker.com, which stuck that in there. And I want my users to go to that link. What I can now do is come into here and create a custom redirect link so that when I give out the link if I show you what the link looks like I just need to move my head out the way I'm always in the way. And if you click on your gear icon at the very end of this link, you will see that the link that the user would see would be courses dot VIP member vote.com forward slash quiz. And when they click on that link, that direct link will then take them to wherever you've got that quiz hosted elsewhere. Some very quickly just going to show you how to create one from scratch. So in this scenario, let's imagine you have people who are applying and they got filling an application form with you to apply to come on your course or your program. You and let's say you've posted that in somewhere like type form, or you have it on a Google Doc and they traditionally have quite long links. So rather than sending out those long links, or going to Bitly or going to pretty pretty links and other places. You can come here into the Links section and use our link feature and create your own redirect link to those external resources. So to do so, you would click on where it says Add Custom redirect link. And it brings you to this area it's again really simple to complete. Give your link a name so I'm going to call this one apply. Oops, because one apply because I want somebody to fill out an application form and the link that I want to shorten it to will be my domain name forward slash apply. And where do I want them to go to apply and I'm going to pop in here, let's say WWW dot type form comm like a display type is horrible today, forward slash lots of random letters. So we've got a long URL that we're trying to make shorter. And then I'm going to say and then we're gonna hit the Add customer directory, it's

automatically going to shorten that long domain name there and make it a short name that is now attached to my personal domain or your personal domain. Just takes a second my computer's a bit slow. And there we go. We now have that created. So whenever I want somebody to apply, I could just say to them Go to my my domain they say courses dot VIP member vote for.com forward slash apply. Or I could send them a link by clicking on the gear icon. And when they click on this link, which looks like it's, you know, parts of my business or your business, you send them this link and they click on it and it'll take them straight to the application form so that they can apply. You can also use the file shortly area if you want to if you have a long domain name at all. So not a domain name. If you have a long page name, or product name, you can put that link into here and you can shorten that as well so that you don't have to always give out that super long. meme about address as well. So this is how you use the new links feature. It's fantastic. Give it a go have a little play. Any you don't like you can just go into the edit button and there's a delete button at the bottom to remove it just here. So you can have a little play with our new links feature. Enjoy
