

# CAREERS

## | Cardiologist

### **Who are Cardiologists?**

Cardiologists are doctors who take care of your heart. They check how your heart is beating and how blood moves through your body. They use tests like EKGs and ultrasounds to look at your heart and help treat problems like chest pain, high blood pressure, or heart rhythm issues. They help keep your heart strong and healthy.

### **Would you rather...**

If you were a cardiologist, would you rather use tools like EKGs and ultrasounds to figure out what's going on with the heart, or talk with patients about how to keep their hearts healthy? Why?
