

# CAREERS

## | Dermatologist

### **Who are Dermatologists?**

Dermatologists are doctors who take care of your skin, hair, and nails. They treat things like rashes, acne, eczema, and skin infections. They also check moles and spots to make sure they're healthy. Some dermatologists do small surgeries to remove things like warts or suspicious growths.

### **Would you rather...**

If you were a dermatologist, would you rather help teens with acne or remove moles and spots that might be dangerous? Why?
